RESEARCH

U.S. EQUITY SIGNAL RESEARCH PLATFORM 2026 – Present

Independent research – Python

- Build and maintain a point-in-time research pipeline for U.S. stocks, 2010–2026 (about 5,400 companies), from universe construction through signal tests, trading costs, and portfolio construction.
- Audit the commercial vendor data against companies' SEC filings (e.g., 10-K, 10-Q, 8-K) as of the date each filing became public, and against an independent second source for prices; where they disagree, correct the record from the evidence or exclude it systematically.
- Revisions cover prices, splits, and dividends (e.g., price-entry errors and phantom dividends); share counts and market values; reported fundamentals (as first filed, with later restatements never carried back); and the investable universe (over-the-counter periods, SPACs, bankruptcies, acquisitions, and spin-offs).
- Test factor themes (e.g., value, quality, momentum, reversal, liquidity) with Fama-MacBeth regressions and portfolio sorts against a $t > 3$ multiple-testing threshold.
- Combine the signals that clear the threshold into efficient market-neutral portfolios, net of modeled trading costs.
- Current work: crowding signals from institutional 13F filings; returns around earnings announcements.

DOCTORAL RESEARCH – DUKE UNIVERSITY 2018

"Investors' Cognitive Limitations and the Capital Market Benefits of Avoiding the Recognition of a Compensation Expense in the Income Statement"

- A portfolio of firms with heavy use of unexpensed stock-option grants earned 10–22% a year risk-adjusted; the return varied with the investor base and reversed after the 2001–2002 accounting scandals. Methods: event studies, portfolio regressions, and Fama-MacBeth regressions.

PROFESSIONAL EXPERIENCE

DELOITTE TAX LLP

Senior Manager – Transfer Pricing May 2024 – Present
Manager – Transfer Pricing May 2021 – May 2024
Senior Consultant – Transfer Pricing March 2019 – May 2021

- Price intercompany loans and other debt instruments against market yields and credit spreads, with credit-risk and debt-capacity models built on projected cash flows.
- Value businesses, equity interests, and intellectual property for multinational restructurings, using discounted cash flow, comparable-company, and precedent-transaction methods.
- On a biopharmaceutical client's multibillion-dollar acquisition, supported the valuation of the target's intellectual property rights, modeled debt capacity, and provided pricing indications for the subordinated notes that financed it.
- Lead 20–25 engagements a year with teams of 5–9. Deloitte Outstanding Performance Award.

STATE STREET CORPORATION – MODEL RISK MANAGEMENT December 2017 – December 2018

Quantitative Analyst

- Independently tested FX trading, capital stress-testing (CCAR), and liquidity stress-testing models: data integrity, statistical soundness, back-tests, benchmarks, and sensitivity analyses.
- Wrote validation reports used in regulatory submissions and presented to senior management.

EDUCATION

DUKE UNIVERSITY – THE FUQUA SCHOOL OF BUSINESS 2018

Ph.D. in Finance

- Fields: asset pricing, behavioral finance, corporate finance. Duke University Graduate School Fellowship.
- Teaching assistant, 2013–2017: weekly sessions for MBA courses in corporate finance, investments, and fixed income.

CENTRO DE ESTUDIOS MONETARIOS Y FINANCIEROS (CEMFI), MADRID

M.S. in Economics and Finance

- Fundación Carolina / Fundación BBVA Fellowship.

ESCUELA SUPERIOR POLITÉCNICA DEL LITORAL (ESPOL), GUAYAQUIL, ECUADOR

B.S. in Economics

- Gold Medal Prize: graduated first in a class of 145. Academic Excellence Scholarship.

SKILLS AND INTERESTS

Programming: Python (pandas, NumPy, Streamlit), SQL, Stata, MATLAB; LLM-assisted development.
Data: SEC EDGAR filings, 13F holdings, Bloomberg, S&P Capital IQ.
Languages: English and Spanish (bilingual). **Interests:** tennis, padel, ballroom dancing; history and economics books.
