RESEARCH

U.S. EQUITY SIGNAL RESEARCH PLATFORM 2026 – Present

Independent research – Python

- Build and maintain a point-in-time research pipeline for U.S. stocks, 2010–2026 (about 5,400 companies, 390,000 stock-months), from universe construction through signal tests, trading costs and portfolio construction.
- Audit commercial vendor data against SEC filings as of each filing date; a check of market value against price × filed share count on 20 million stock-days found 2.3% in disagreement.
- Test 11 factor themes with Fama-MacBeth regressions: one (quality, $t = 4.1$) clears the $t > 3$ multiple-testing threshold; momentum ($t = 2.9$) falls just short.
- Combine momentum and quality into a market-neutral book: out-of-sample Sharpe ratio of 0.7–0.9 at $250 million, after modeled spread and impact costs.
- Report what fails: weekly reversal earns a Sharpe ratio of 0.7 before costs and loses money after them even at $10 million; a low-beta strategy shows no reliable alpha ($t = 0.6$ to 2.5 across specifications).
- Current work: crowding signals from institutional 13F filings; returns around earnings announcements.

DOCTORAL RESEARCH – DUKE UNIVERSITY 2018

"Investors' Cognitive Limitations and the Capital Market Benefits of Avoiding the Recognition of a Compensation Expense in the Income Statement"

- A portfolio of firms with heavy use of unexpensed stock-option grants earned 10–22% a year risk-adjusted; the return varied with the investor base and reversed after the 2001–2002 accounting scandals. Methods: event studies, portfolio and Fama-MacBeth regressions.

PROFESSIONAL EXPERIENCE

DELOITTE TAX LLP

Senior Manager – Transfer Pricing May 2024 – Present
Manager – Transfer Pricing May 2021 – May 2024
Senior Consultant – Transfer Pricing March 2019 – May 2021

- Price billions of dollars of intercompany loans and other debt instruments a year against market yields and credit spreads, with credit-risk and debt-capacity models built on projected cash flows.
- Value businesses, equity interests and intellectual property for multinational restructurings, using discounted cash flow, comparable-company and precedent-transaction methods.
- Valued the target and modeled debt capacity for a biopharmaceutical client's $1 billion acquisition of intellectual property, and supported pricing of the subordinated notes that financed it.
- Lead 20–25 engagements a year with teams of 5–9. Deloitte Outstanding Performance Award.

STATE STREET CORPORATION – MODEL RISK MANAGEMENT December 2017 – December 2018

Quantitative Analyst

- Independently tested FX trading, capital stress-testing (CCAR) and liquidity stress-testing models: data integrity, statistical soundness, back-tests, benchmarks and sensitivity analyses.
- Wrote validation reports used in regulatory submissions and presented to senior management.

EDUCATION

DUKE UNIVERSITY – THE FUQUA SCHOOL OF BUSINESS 2018

Ph.D. in Finance

- Fields: asset pricing, behavioral finance, corporate finance. Duke University Graduate School Fellowship.
- Teaching assistant, 2013–2017: weekly sessions for MBA courses in corporate finance, investments and fixed income.

CENTRO DE ESTUDIOS MONETARIOS Y FINANCIEROS (CEMFI), MADRID

M.S. in Economics and Finance

- Fundación Carolina / Fundación BBVA Fellowship.

ESCUELA SUPERIOR POLITÉCNICA DEL LITORAL (ESPOL), GUAYAQUIL, ECUADOR

B.S. in Economics

- Gold Medal Prize: graduated first in a class of 145. Academic Excellence Scholarship.

SKILLS AND INTERESTS

Programming: Python (pandas, NumPy, Streamlit), SQL, Stata, MATLAB; LLM-assisted development (Claude Code).
Data: SEC EDGAR filings, 13F holdings, Bloomberg, S&P Capital IQ.
Languages: Spanish (native), English (fluent).
Interests: tennis, padel, ballroom dancing; history and economics books.
